ABSTRACT

EasyJobs- Online Job Portal

Proposed Job Portal system consists of 3 modules: **Job Seeker**, **Job provider** and **Administrator**.

Technology - Python Django

This project is about the recruitment process which is done online. This will allow the person to apply for a job in the company. The person will be having the account after registration. The project is created for fulfilling the requests of the company managers so that the recruitment module can be placed in the company's website and the users who visit the website can view the jobs in the company and will be able to apply directly from remote places. The candidates can apply for the specific field. They can also search for specific jobs by location, by company, by job. Allows them to post their resume.

This project will provide the registration facility to the job providers .They can create their profile, posting of jobs, view applications and resume,view shortlisted candidates, send call letters. Administrator can manage the whole website. Admin can view the jobseeker's applications for each job, can view posted jobs ,view shortlisted candidates etc. Admin can reject job seekers/job providers.
